MEMORANDUM FOR: Deputy Director of Information and Technology

25X1
FROM:

Deputy Director of Training and Education
for Curriculum

SUBJECT: Request for Fiber Optics Network

1. This memorandum requests that the Office of Information and Technology establish a black fiber optics network between all outer buildings by the year 1990.

2. Background. The Office of Information and Resources (OIR) is establishing two video training channels for the Office of Training and Education. OTE intends to use the channels for live and prerecorded training programs throughout the Headquarters building. OTE believes it will be positioned to fully utilize the two channels by the time the Headquarters grid system is completed. Learning Centers will also be established in outer buildings to train employees and receive the video programming. OTE will need the capability to broadcast training to all out buildings.

3. OIR has been notified of the fiber optics concept and their possible involvement in the transmission of the video programming and are in agreement with this proposal.

4. I appreciate your assistance and will discuss our requirement for a fiber optics network in further detail at your convenience.
